

Advanced Test #001

SCP-1208, SCP-268

Invariem

Assistant Researcher, Scientific Department, SC-1

August 29, 2025

Does SCP-1208 still have the ability to transmute people's limbs into waffles whilst under the invisibility of SCP-268? Will the waffles remain permanently invisible or only for a duration?

Abstract

The test was a success, and showed that SCP-268 will only affect organic human matter, as well as any original accessories or materials that were attached to the character of the subject on spawn, as SCP-1208's waffles were visible during SCP-268's effects.

Research Information

SCP(s):

- SCP-268 ↗, Safe, Cleanrooms
- SCP-1208 ↗, Safe, Cleanrooms

Class-D:

- SINDEIRY, D-54900

Combatives:

- IncomingComando, MP Primary Constable
- lukas09564, Security Senior

Spectators:

- RaptorBlue1922, EMS Student Paramedic
- IceAndSand, Junior Researcher
- djioausii, Supporter
- Dipy8505, Nurse
- ddust1n, EMS Trauma Specialist

Hypothesis

I hypothesise that SCP-1208's waffles will be invisible during SCP-268's effects. This is based on the fact that SCP-1208 seemingly interacts with the body on a cellular level, affecting the inner biology of the subject affected. This implies to me that SCP-268 should see the affected appendages as part of the subject, providing complete invisibility. The excerpt from the object description of SCP-1208 supports this belief; "no pain and will still be fully capable of basic interaction with their surroundings." ↗

Research Description

Test Preparations

- I began by requesting 1 Class-D and 1 SD to the cleanrooms.
- I then prepared my recording software to capture the test in its entirety for redundancy.
- After waiting by the scanners, the escort arrived, and we were briefed.
- We were escorted to VACANT, and waited for both anomalies to be transferred accordingly.
- After both anomalies were in place, I briefed the Class-D, and the test began.

Testing Phase

The test was straightforward, and the Class-D complied throughout. The Class-D was initially instructed to interact with SCP-1208 without equipping SCP-268 as a control measure; the Class-D's foot and leg turned into waffles immediately, as expected. Upon equipping SCP-268, it was immediately apparent that the pre-waffled areas were visible when SCP-268 was active. Following this, the Class-D was instructed, whilst invisible, to interact with SCP-1208. The areas in which they were in contact with SCP-1208 were transformed into waffles and were visible even under SCP-268's effects. Upon further reactivations of SCP-268 to verify the findings, waffle-affected appendages were always visible under SCP-268's effects.

Conclusion & Discoveries

Contrary to my hypothesis, SCP-268 affected appendages were visible under the effects of SCP-1208 (4). This implies that SCP-268 sees these appendages as fundamentally foreign to the subject it inhabits. Importantly, this raises potentially crucial questions about the nature of the waffles that SCP-1208 generates; Are they truly equivalent to waffles?¹ Do they bear any other anomalous properties that could distinguish them from biological material that SCP-268 accepts? Further testing would be required, such as trying to test on Class-D who have received a transplant from another human, or an animal, or a biological synthetic replacement - this should be sufficient to help narrow down what SCP-268 sees as *part* of the subject it is affecting.

¹The actual wiki article for SCP-1208 does state that, "Deformation caused by this process is entirely topological: any substructures present in the source material remain intact but deformed," which supports my initial hypothesis, but was not referenced due to it being unofficial to this game.
